

JOHNS HOPKINS  
MEDICINE

# Johns Hopkins Brady Urological Institute

The Schaufeld Program is recruiting post-baccalaureate students interested in pursuing 1-2 years of full time, laboratory or public health-based research on prostate cancer. This position is optimal for students seeking a post-undergraduate research experience before pursuing a higher degree in medical or graduate school. Students will choose a mentor from among the many faculty at Johns Hopkins studying prostate cancer and join their research team.

In addition to pursuing research projects, students will also be involved in the community-based initiatives of the program and will have access to many enrichment activities including MCAT preparation courses, clinical shadowing, and mentorship from the graduate and medical school programs at Johns Hopkins.

The goal of the program is to prepare students for medical school or graduate school in the biomedical sciences.

**1-2 year paid research  
fellowship program!**

## Eligibility

The ideal candidate is a current senior or recent college graduate with a record of successful completion of introductory biology and/or other science courses in college, and has a commitment to and record of inclusionary conduct in work, educational and social contexts; work in health disparities; and/or having a sincere desire to serve populations affected by societal inequities, including underrepresented groups.

Members of underrepresented or educationally-disadvantaged groups are encouraged to apply.

Applications currently being accepted from November 1st through April 1st

*Schaufeld Scholars volunteering at Day at the Market*

*Schaufeld Scholars prepare to observe a surgery.*

**If interested in applying, or you would like to explore further collaborative efforts, please contact Program Coordinator Stephen Johnson [sjohn215@jhmi.edu](mailto:sjohn215@jhmi.edu)**
