

Johns Hopkins Center for Fetal Therapy

10 Celebrating years

4,500

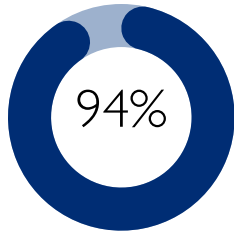

Patients

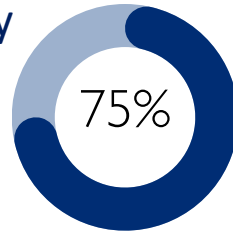

1,500

LIFE-SAVING FETAL PROCEDURES

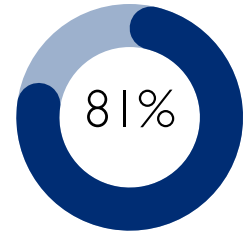

Overall survival
after laser for
TTTS

Spina bifida closures
performed via
fetoscopy

Survival after FETO for
severe diaphragmatic
hernia

- First trimester fetal interventions
- Solomon laser first line for all TTTS
- 50% of patients return to referring doctors
- Reproductive choices
- Complex deliveries

4,500 PATIENTS

1,500 LIFE-SAVING
FETAL
PROCEDURES

SELECT REFERRED CONDITIONS

Complicated monochorionic multiple pregnancies	1,288
Complex cardiac abnormalities	247
Congenital diaphragmatic hernia	176
Congenital pulmonary malformations	72
Hydrothorax	40
Urinary tract obstruction	77
Bilateral renal agenesis	39
Complex renal abnormalities	241
Spina bifida	153
Hydrops	126
Fetal or placental tumors	39
Fetal arrhythmia	38

FETAL THERAPIES PERFORMED

Laser surgeries for TTTS or TAPS	476
Cord occlusion or transection procedures	98
Tracheal occlusion for severe CDH (FETO)	23
Thoracoamniotic shunting	28
Vesicoamniotic shunting or fetal cystoscopy	59
Serial amnioinfusion treatment	206
Fetoscopic or open spina bifida repairs	41
Fetal blood sampling, transfusion or exchange transfusion procedures	454
Other invasive procedures: Amniotic band resections Placental tumor ablation Fetal tumor sclerotherapy Cesarean scar ectopic treatments	34
Transplacental medical treatments: For fetal tumors or masses For fetal arrhythmia	76
Multidisciplinary deliveries including EXIT	19
