

The Johns Hopkins Fertility Center

Our newly expanded Fertility Center offers an expert team of infertility specialists including reproductive endocrinologists, clinical nurses, urologists and embryologists who work together to provide comprehensive and patient-centered fertility care in one central location.

Treatments & Services

- Fertility consultations for common or complex causes of infertility
- Fertility enhancing surgeries
- Intrauterine insemination (IUI)
- In vitro fertilization (IVF)
- Fertility preservation, including egg freezing and ovarian tissue freezing
- Ability to perform oocyte retrievals in hospital setting for medically complex patients
- Genetic counseling
- Pre-implantation genetic testing
- Male Infertility diagnosis and treatment
- Egg donation, sperm donation and gestational surrogacy
- Consultations and treatments for hormonal conditions that affect fertility and quality of life

For appointments or referrals, call
410-847-3835

Fertility Center Components

Assisted Reproductive Technology (ART) Laboratories

Our andrology lab and embryology lab are state-of-the-art facilities with 20 years of history performing a wide range of fertility services.

Subspecialty-Trained Care Team

Our team of physicians, embryologists and nurses are all subspecialty-trained and leaders in the field, with easy access to more specialists within the health system, allowing providers to form close collaborations that can improve outcomes.

Surgery Center

Our single-specialty ambulatory surgery center includes one operating room, one procedure room and five prep and recovery bays.

Patient-Centered Clinic

Our expanded clinic space allows us to perform ultrasound, blood testing and other fertility-related procedures in one central location. We offer in-person and telehealth appointments.

NEW ADDRESS

Green Spring Station
10755 Falls Road
Pavilion I, Suite 403
